Table 1. Effects of ultrahigh hydrostatic pressure on various microorganisms (Ortega-Rivas 2012)

|  | Conditions |  |  |  |  |
| :--- | :--- | :---: | :---: | :--- | :--- |
|  | Pressure <br> $(\mathrm{MPa})$ | Time <br> $(\mathrm{min})$ | Decimal <br> reduction | Media |  |
| Microorganism | 300 | 5 | 5 | Satsuma mandarin juice |  |
| Saccharomyces cerevisiae | 300 | 5 | 5 | Satsuma mandarin juice |  |
| Aspergillus awamori | 360 | 5 | 1 | Minced beef muscle |  |
| Listeria innocua | 360 | 10 | 4 | Phosphate buffer saline |  |
| Listeria monocytogenes | 350 | 10 | 2.5 | Phosphate buffer saline |  |
| Vibrio parahaemolyticus | 172 | 10 | 1.8 | Phosphate buffer |  |
| Salmonella typhimurium | 345 | 10 | 1.8 | Fresh cut pineapple |  |
| Total plate count | 340 | 5 | 1.9 |  |  |

# Table 2. Antimicrobial activity of aromatic plants and essential oils added to cheeses (Gouvea et al., 2017) 

| Cheese Type | Natural antimicrobial (Source and concentration) | Inhibitory activity (microrganisms, counts, and storage conditions) | Reference |
| :---: | :---: | :---: | :---: |
| Feta | Oregano ( $0.1 \mathrm{~mL} 100 \mathrm{~g}^{-1}$ ) Thyme ( $0.1 \mathrm{~mL} \mathrm{100}{ }^{-1}$ ) | Inhibition of L. monocytogenes and E. coli 0157: H7 population ( $10^{4} \mathrm{CFU} \mathrm{g}^{-1}$ ) for 18 and 22 days, respectively, after storage under modified atmosphere packaging ( $50 \%$ de $\mathrm{CO}_{2}$ e $50 \%$ de $\mathrm{N}_{2}$ ) at $4^{\circ} \mathrm{C}$. | GOVARIS et al. (2011) |
| Cheddar | Garlic (dipping 25 g of cheese in 100 mL of plant extract solution). | Inhibition of $L$. monocytogenes ( $2 \log \mathrm{CFU} \mathrm{mL}^{-1}$ ) after storage at $23^{\circ} \mathrm{C}$ for 9 days. | SHAN et al. (2011) |
| Kareich | Cayenne (3\%) or Green Pepper (9\%) | Inhibition of $S$. aureus ( $1 \times 10^{8} \mathrm{CFU} \mathrm{g}^{-1}$ ) to undetectable levels within 2 days of storage at $4^{\circ} \mathrm{C} \pm 2^{\circ} \mathrm{C}$. | WAHBA et al. (2010) |
| Domiati | Black cumin seed oil (0.1\% e 0.2\%) | Decreased in Salmonela enteritides and Escherichia coli counts from $3.95 \log \mathrm{CFU} \mathrm{mL}^{-1}$ to $2.6 \log \mathrm{CFU} \mathrm{g}^{-1}$ after storage at $4^{\circ} \mathrm{C}$ for 42 days. | HASSANIEN et <br> al. (2014) |
| Sheep's cheese | Rosemary essential oil ( $215 \mathrm{mg} \mathrm{L}{ }^{-1}$ ) | Prevented the growth of Clostridium spp. counts $3 \log$ $\mathrm{CFU} \mathrm{g}{ }^{-1}$ ripened for 5 months at $12^{\circ} \mathrm{C}$ | MORO et al. (2015) |
| Coalho Cheese mimicking models | Thymus essential oils ( $\mathbf{2} .5 \mu \mathrm{~L} \mathrm{~mL}{ }^{-1}$ ) | Reduced $1.3 \log$ CFU $\mathrm{mL}^{-1}$ counts ( from initial count) of $L$. monocytogenes incubated at $10^{\circ} \mathrm{C}$ for 24 hours | CARVALHO et al. (2015) |
| Cheddar Based Media | Cinnamon ( $400 \mu \mathrm{~g} \mathrm{~mL}{ }^{-1}$ ) garlic ( $625 \mu \mathrm{~g} \mathrm{~mL}{ }^{-1}$ ), lemon grass ( $550 \mu \mathrm{~g}$ $\mathrm{mL}^{-1}$ ), cress $(475 \mu \mathrm{~g} \mathrm{~mL}$ ), rosemary ( $750 \mu \mathrm{~g} \mathrm{~mL}^{-1}$ ), sage ( $825 \mu \mathrm{~g} \mathrm{~mL}^{-1}$ ) and oregano extracts ( $950 \mu \mathrm{~g} \mathrm{~mL}$ ) | All extract concentrations individually inhibited the population of $L$. monocytogenes ( $4 \times 10^{5} \mathrm{CFU} \mathrm{mL}^{-1}$ ) incubated at $37^{\circ} \mathrm{C}$ for 24 hours | TAYEL et al. (2015) |
| Fior di Latte | Thyme and sage essential oil ( $1500 \mathrm{mg} \mathrm{kg}^{-1}$ ) | Inhibition of Pseudomonas spp and coliforms stored at $10^{\circ} \mathrm{C}$ for 6 days | GAMMARIELLO <br> et al. (2008) |
| Whey and Requesón whey | Safranal ( $35 \mu \mathrm{~g} \mathrm{~kg}$ - ${ }^{-1}$ | Inhibited over $15 \%$ Penicillium verrucosum growth (population of $10^{5} \mathrm{CFU} \mathrm{mL}{ }^{-1}$ of spore). | LIBRȦN et al. (2014) |
